Technical Skills

Coding / Architecture Python, Node.js, Web Backend (PHP, webapp2, Express),
Datastores (MySQL, MongoDB, Redis, PostgreSQL),
Web Frontend (Javascript, AngularJS, ReactJS, jQuery, HTML5, CSS3),
Game Engine (Unity - C# and Javascript), CMS (Wordpress, Ghost),
Mobile Development (Cordova, Sencha), Scripting (Bash)

Deployment Nginx, Cloud Infrastructure (AWS), Docker

Repositories Mercurial, Git

Experience

2014–Present **Software Engineer**, *DYNAMICNEXT*, Kochi, India.

DYNAMICNEXT founded in 2012 is a company involved in making social strategic games. Its titles include Downtown Mafia, which has more than a million users.

Projects I have worked on:

- Downtown Casino:
 - Design and development of core functionalities of the game
 - Server deployment
 - Implementing in-app purchases
- Downtown Mafia:
 - Implementation of additional functionalities in the game

2013–2014 **COO & Co-founder**, *Coppra*, Kochi, India.

Coppra was founded in 2013. It has developed many websites and web applications for various clients including Startup Village, KSEB, etc. Coppra was the first to launch a Malayalam movie promotion game (for Android). It has also done title game for a renowned local animation series. I was in core team in charge of products and services provided by the company and a leading developer.

Projects I have worked on:

- Different websites including that of Startup Village's official website
- Backend of games developed by the company

Education

2013 **B.Tech in Computer Science and Engineering**, *MES College of Engineering*, Kuttippuram, 68.9%.

2009 **AISSCE**, *S N Vidya Bhavan*, Chentrappinni, 82.6%.

2007 **AISSE**, *S N Vidya Bhavan*, Chentrappinni, 83.2%.

Academic Projects

Main Project

Title *Intelligent Traffic Lights Based on RFID*

Description The project was to implement a dynamic traffic signaling system based on Radio Frequency Identification (RFID). The RFID readers located at the intersections of roads detect RFID tags fixed in every vehicle. By this, one can determine the count of vehicles in the waiting queue of each lane and thus dynamically compute the time for which the lane is signaled green. The system also allows assigning priority to vehicles and also tracing vehicles in cases of theft or traffic rule violation.

Mini Project

Title *Single Sign-On*

Description The project was to implement single sign on for managing multiple personal accounts of users. This is a website where one can save his login credentials for different sites, and later login to each of them without the need to re-enter the login details.
